

# DEKTON

*Care | Maintenance Card*

DOWN EAST GRANITE

*Natural beauty that lasts a lifetime*

Taking care of your **Dekton** is important to maintain its beauty.

- **Daily Cleaning:** Wipe the surface with a sponge or scoring pad, using soap and water or specialized stone cleaner. This will help remove any surface dust or light stains without damaging the material.
- **Stubborn Stains:** For removing harder stains, use more specific products such as cream detergents that contain more abrasive particles or solvents (i.e. acetone or universal solvent type).
- **Spill Management:** Promptly clean up any spills, especially those involving acidic substances like lemon juice, vinegar, or wine, to prevent staining.
- **Heat Protection:** Although Dekton is highly resistant to heat, it is recommended to avoid direct contact with flames.
- **Scratch Prevention:** While Dekton is scratch-resistant, using cutting boards is recommended to maintain the surface and protect your knives. Also, avoid the use of metal scoring pads, this can lead to the loss of product guarantee.
- **Sealants:** Unlike natural stone, Dekton does not require sealing. Its non-porous nature makes it highly resistant to water and stains.
