

CORIAN SOLID SURFACE

Care | Maintenance Card

DOWN EAST GRANITE

— Natural beauty that lasts a lifetime —

Taking care of your **Corian solid surface** is important to maintain its natural beauty.

- **Daily Cleaning:** Wipe the surface with a damp cloth and a mild soap or detergent. Avoid using harsh chemicals or abrasive cleaners, as these can damage the surface.
- **Stain Removal:** For tougher stains, use a non-abrasive household cleaner. Apply the cleaner to the stain, let it sit for a few minutes, and then gently scrub with a soft sponge or cloth. Rinse thoroughly with water.
- **Preventing Damage:** Always use cutting boards for chopping or slicing to avoid scratching the surface. Place hot pots and pans on trivets or heat pads to prevent thermal damage.
- **Dealing with Scratches:** Minor scratches can be buffed out with a fine-grit sandpaper or a specialized Corian repair kit. After sanding, polish the area with a Corian polish or a non-abrasive polish to restore its shine.
- **Avoiding Excessive Moisture:** While Corian is non-porous and resistant to stains, standing water can cause damage over time. Wipe up spills promptly and avoid leaving wet cloths or sponges on the surface for extended periods.
- **Regular Maintenance:** Periodically, you can use a Corian cleaner or a mild abrasive cleaner to maintain the surface's luster. Follow the manufacturer's instructions for the best results.
